

Upgrade 1.987 to 1.987M

This upgrade consists of four files only. It includes the support for the M2000C (Mirage) aircraft. The support for the SA342 could not be include because the vendor needs to finalize the airborne radios for the Gazelle first.

To install the upgrade, please unzip the file AriesUpgrade1987M.zip in a folder of your choice. Start Setup.exe and follow the instructions given in the dialogs.

The upgrade works only with an installed Aries Radio of version 1.987. If version 1.987 is not installed or if you are unsure about the installed version, then perform a new installation from the scratch with a download of <http://www.ariescon.com/AriesWingsRadio1.987M.zip>.
